

Pit In and Pit Out at VIR

I just wanted to give everyone an update on continued upgrades at VIR. We have painted the blend lines on the North Course pits to reflect a no drive zone to help identify the pit lanes and to hopefully avoid late dive in's and early dive out's.

If you could, please enforce these green and yellow “no drive through” areas and start getting the message out to have people committing to pit in at the apex of Turn 17 instead of waiting to track out on the turn and then crossing over the track to get into pit lane. At no time should anyone be crossing over the painted areas unless it is an emergency.

If you are a race sanctioning body, then we would ask that you please enforce or discipline people who practice this dangerous activity during racing situations and also let everyone know these areas are not to be used to execute passing.

It is our intention to place a camera on the pit in area that has a feed to race control for the purpose of monitoring and assessing penalties.

Thanks so much,

Kerrigan Smith
